

**Amendments to the Claims:**

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Previously Presented) An apparatus for generating a summary of a document, comprising:

an image capture device for capturing an original image of a document;

a processing device for detecting annotations made to the document prior to image capture and extracting portions of the original image of the document, the extracted portions being identified by the detected annotations; and

a summary generator for generating a summary including only the extracted portions of the document, the summary being generated as a separate electronic image document that is different from the original image.

2. (Original) The apparatus according to claim 1, wherein the summary generator is operative to generate a summary of the same document as that on which the annotations are detected.

3. (Original) The apparatus according to claim 1, wherein the summary generator is operative to generate a summary of a different document as that on which the annotations are detected.

4. (Original) The apparatus according to claim 3, wherein the image capture device is operative to capture an image of a second document to be summarized based on the detected annotations from a first document.

5. (Original) The apparatus according to claim 1, wherein the processing device is operative to identify an image region associated with a detected annotation.

6. (Original) The apparatus according to claim 5, wherein the image region represents a sentence in the document image to provide context for the identified annotation.

7. (Original) The apparatus according to claim 1, wherein the summary generator is operative to generate a summary comprising portions which are selectively expandable to increase the information in that portion of the summary.

8. (Previously Presented) A method of generating a summary of a document, comprising:

capturing an original image of a document;

detecting annotations made to the document prior to image capture;

extracting portions of the original image of the document, the extracted portions being identified by the detected annotations; and

generating a summary including only the extracted portions of the document, the summary being generated as a separate electronic image document that is different from the original image.

9. (Original) A method according to claim 8, wherein the document summarized is same document as that on which the annotations are detected.

10. (Original) A method according to claim 8, wherein the document summarized is a different document from that on which the annotations are detected.

11. (Original) A method according to claim 10, further comprising capturing an image of a second document to be summarized based on the detected annotations from the first document.

12. (Original) A method according to claim 8, wherein said detection comprises identifying an image region associated with a detected annotation.

13. (Original) A method according to claim 12, wherein the image region represents a sentence in the document image to provide context for the identified annotation.

14. (Original) A method according to claim 8, further comprising generating a summary comprising portions which are selectively expandable to increase the information in that portion of the summary.

15. (Previously Presented) The apparatus according to claim 1, wherein the summary includes expandable detail levels.

16. (Previously Presented) The method according to claim 8, wherein generating the summary includes providing the summary in expandable detail levels.

17. (New) The apparatus according to claim 1, wherein the summary includes the extracted image maps of the original image of the document.

18. (New) The method according to claim 8, wherein generating the summary includes extracting image maps of the original image of the document.

19. (New) The apparatus according to claim 1, wherein the summary includes at least one of a pointer and address indicating a place in the original image of the document from which the extracted portions are extracted.

20. (New) The method according to claim 8, wherein generating the summary includes providing at least one of a pointer and address indicating a place in the original image of the document from which the extracted portions are extracted.
